1.2. Conclusion

Pairing procedure does not work with non-british operating systems. The Author has been informed about the problem and found the cause. On the TRFX version of the file created on a non-british machine a decimal point is a ',' (comma) but on the UK version the decimal point is a '.' full stop. The author needs to change the code to ensure the decimal point is always correct.

The program will be checked at a later date.

The screenshot shows the UTU Swiss software interface. The main window displays a list of players and a pairing table. A dialog box is open in the foreground, displaying the message: "UTU Swiss Pairings can not be automatically created." with an "OK" button.
